Save for later

It's a question that's fascinated us for centuries - what is the nature of creativity? Can we find its roots in the human brain? And if so, can we boost our creative powers?

To discuss creativity Ian Sample is joined in the studio by [Dr Caroline Di Bernardi Luft](#), from the Department of Psychology at Goldsmiths, University of London. Down the line is [Dr Anna Abraham](#) from the School of Social, Psychological and Communication Sciences at Leeds Beckett University, and from the University of New Mexico we have [Professor Rex Jung](#).

Science Weekly will be taking a summer break throughout August. Join us again when we return in September.
